Community Memorial Healthcare has been serving the Marysville, Kansas community for the past 50 years. Their new facility will allow them to expand their prevention, diagnosis, inpatient and outpatient treatment, and rehabilitation services and programs to impact their growing rural community. BHC RHODES provided site design services for the new facility. The site design consisted of demolition, site layout, site grading and erosion control, storm drainage, utility service connections, public sanitary sewer replacement, and permitting assistance. This hospital is one of multiple healthcare facilities the company has designed to assist Hofer Wysocki Architects, LLC.
