

PROJECT TITLE:

Long Haul Fiber Optic Cable Engineering

Project Location:	Oregon and California
Scope:	Engineering, Right of Way, Environmental and Construction Management Services
Self-Performed Work:	Comprehensive services from feasibility through final construction
Construction Cost:	\$100,000,000
Services Cost:	\$4,794,000
Project Start Date:	1994
BHC RHODES Client:	AT&T
Contact Name:	Kevin Lorenzini
Phone Number:	(916) 941-8591
Project Owner:	AT&T
Contact Name:	Kevin Lorenzini
Phone Number:	(916) 941-8591

A major telecommunications carrier installed a 600-mile long fiber optic cable system from their cable station on the Oregon coast to a terminal facility in California. We were selected to provide comprehensive services and take the project from feasibility through final construction completion under an aggressive schedule. Services included aerial photography, control surveying and easement acquisition. BHC RHODES acquired over 100 easements for the project, provided all support surveying and exhibit development and produced over 600 drawings that were fully integrated into the surveying control/ortho corrected photo grid. All property ownership and boundaries were included. The client was very pleased with the outcome of this project.
