

PROJECT TITLE:

Long Haul Fiber Optic Cable Engineering

Project Location:	Atlanta, GA to Chattanooga, TN
Scope:	Engineering and Drawing Production
Self-Performed Work:	Field Design for 165 miles

A major telecommunications carrier constructed a national fiber optic cable network exceeding 30,000 miles. We were hired to engineer several segments of the network including a 165-mile segment from Atlanta, Georgia to Chattanooga, Tenn.

The project consisted of detailed engineering and drawing production services. It included field design and production of more than 800 detailed construction drawings. Our client utilized the drawings to obtain permits, hire a contractor, track and complete construction and prepare record drawings.
