

PROJECT TITLE:

Re-Development Survey High-Definition Surveying (HDS)

Actual Photo

This grocery store and parking area in Kansas City, KS was being researched for future re-development. BHC RHODES was asked to provide high-definition surveying (HDS) of the parking lot for re-design. We provided HDS and laser scanned the entire grocery store and site to provide a topographic base map. The laser scan data was then used to provide contours and planimetrics to reflect existing conditions of the site.
