

PROJECT TITLE:

Telecom Last Mile

Project Location:	Columbia, Missouri
Scope:	Outside Plant and Permitting Services
Self-Performed Work:	1.6 miles of OSP design, permitting, basemapping and construction drawings.

BHC RHODES was selected by a regional next-generation telecommunications company operating a fiber optic network in the Midwest, to provide outside plant design and permitting services on a 1.6-mile tie-in. The telecom company was connecting their backbone cable to a customer’s downtown central office. BHC RHODES provided services related to OSP design, permitting, basemapping and construction drawings. We also coordinated field design with the Missouri DOT and the City of Columbia and produced drawings for permitting and fixed price construction bidding. Our designs resulted in a smooth construction process that was completed on time with few changes.
