Wilson County Hospital is a 45,000 square foot facility that has replaced the existing hospital of 91 years of Healthcare Services in Neodesha and the surrounding community. The new facility will have an Inpatient unit, a large Emergency Department, an expanded Laboratory and Imaging Service, and Major and Minor Surgical and Recovery Suite.

BHC RHODES provided site layout design, utility design, grading and pavement design, and site specifications for the new facility. This hospital site is one of many new replacement facilities the company has designed for Health Facilities Group due to our quality and efficient site design plans.
