BHC RHODES conducted boundary, topographic, engineering, platting, street infrastructure, storm and sanitary sewers, water, power, and gas and telephone survey for the 170-acre project.

We conducted a survey for moving a pipeline over 3000 lineal feet, moving an electric transmission line west from the center of the project, conducting an as-built survey of the race courses, horse and dog tracks, and separate courses. Platting of the Woodlands Commercial and Woodlands West that contained additional 80-acres adjacent to the race tracks was also conducted.
